NYC Taxi Batch ETL - Setup Guide

1. Run setup

Requires Docker Desktop (running) and Git Bash. From the project folder:

```
bash setup.sh
```

2. Required ports

Port	Service
8888	Airflow UI
8088	Superset UI
5433	PostgreSQL warehouse (taxi_dw)

3. Logins

Tool	Address	Username	Password
Airflow	http://localhost:8888	admin	admin
Superset	http://localhost:8088	admin	admin
PostgreSQL (pgAdmin)	localhost:5433, database taxi_dw	dw_user	dw_password

4. DAGs

Run the five dimension DAGs first, then load the trips.

DAG	What it does
datetime_dim	Builds the hourly calendar dimension
payment_type_dim	Loads payment types (SCD Type 1)
vendor_dim	Loads vendors (SCD Type 2)
rate_code_dim	Loads rate codes (SCD Type 2)
location_dim	Loads taxi zones (SCD Type 2)
taxi_daily_etl	Daily load of one day of trips into bronze and the fact table
load_custom_date	Loads a date range of trips (START_DATE / END_DATE in custom_date_load.py)
